Senior Process-/ Metallurgical Engineer Development and applications

Your responsibilities

The EKATO R&D department, brings together the know-how and expertise of EKATO with the specific process requirements of the customer. As a development engineer your responsibilities will be to research and further develop of our mixing systems and solutions, focusing on minerals processing applications. This will be done in close cooperation with our international clients. This position offers excellent career development within the EKATO GROUP companies.

Your profile

- Your educational training in process technology and your experience in metallurgical process allows you to solve new research problems based on theoretical considerations as well as independent experimentation.
- You will guide multi-discipline teams of specialists with developmental projects. As team player are you working in the frame of project groups, sales department and international customers.
- You are able to present technical facts and arguments convincingly.
- The place of employment will be in our head office in Germany. Fluent English language skills are required to communicate with our international business partners.
- Occasional travelling will be required as part of your position.
- The ideal candidate will have had at least 5 years of experience in the field of hydrometallurgy or minerals processing.

If you are interested in this challenging position within a diverse global company, we would be pleased to receive your application.
