Connections between processes - mixing tasks - impellers

- Classification of impellers
- Traditional vs. EKATO high-performance impellers

Examples

- EKATO VARIOBLADE
- EKATO PARASEG
- EKATO ENDSFOIL

Objectives

Efficiency increase, in other words, investment and operational costs are in direct focus in case a new mixing solution has to be established. On top of this, flexibility or product quality can often be significantly improved, which might be of even higher value for our customers.

In this webinar we want to show examples for new developed impellers – and how the development of these impellers follows the process needs – making the processes of our customers more efficient.

Target Group

General managers, process engineers, R&D specialists, production managers, buyers, project managers as well as anyone interested in process development, equipment engineering and production improvement.
