

Maintenance Contract

Maximum plant safety through scheduled, regular agitator maintenance

Plant downtimes should never occur unplanned

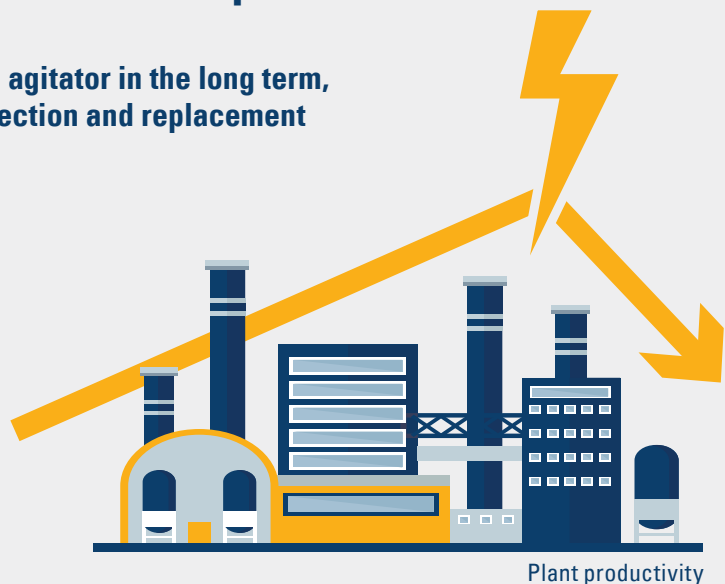

In order to maintain the productivity of an agitator in the long term, regular agitator maintenance, visual inspection and replacement of wear parts are required.

Plant & process safety

- Plannable maintenance intervals
- Process efficiency
- Reliability
- Profitability
- Higher plant availability
- Reduction of unplanned downtimes

Advantages

- Planning security
- Monitoring of intervals and wear parts by EKATO
- Saving of storage space due to just-in-time delivery of wear parts
- Fixed price
- Reduced downtime and service costs
- Cost control
